Processor: Any dual core CPU or highe

English,French,Turkish,Czech

Not bad thanks guys :D. We all know Time warner/ Specturum Is. Not known for great up times atleast in my part of the woods. I have 500 down and 30 up and use this when my internet is acting a little funky. Norm sorts it right out the web page will load right up. Like today I got off nord VPN and wanted to browse amazon but amazon wasnt having it. So I load this program up

and BAM she worked in 2 secs. Idk what they did to the interface tho its kinda u2665u2665u2665u2665ed now. If they fix that that would be great, Does this boost your speeds? Not at my tier of internet no. Does this help with small connection and firewall isuess really fast. Yessir. Is this a scam? NO! Should you buy if you have internet issues YES! Sorry for spelling andu2665u2665u2665u2665u2665u2665im a redneck drop out.. 100 % scam do not buy this. I don't know what it did but when I use my long range WIFI antenna to sometimes the internet was very slow, with this just before going online, one click and its faster and snappier. Does something, does not describe exactly what, but it works. Don't regret buying it, some explanation of the "magic" it does would be nice. Not a scam.
