About This Software

mdiapp+ SE is a paint tool for creating cartoon.

It is equipped with the following convenient functions for creating a cartoon, such as:

- 1bit/8bit layer that requires a small memory consumption (the standard color layers are also available)
- 32bit and 64bit versions available (64bit version enables a faster performance)
- Project management window that enables to organize the cartoon pages
- Supporting multi thread (for the brush/blending mode processing)

- Script Brush that enables programming (Lua)
- 3D Perspective tool for drawing sterically
- Pen Pressure input from a pen tablet (Wintab/TabletPC)
- Free Transform/Mesh Transform on layer
- Common MDP format with FireAlpaca/MediBang Paint
- Concentration Lines Filter

A handy little program that has great tools for drawing in perspective, motion lines, curves, etc. Great for aspiring comic book artists. On the downside, there's very little information about this program in english, so unless you're fluent in Japanese some of the features may require a bit of trial and error.. This is endless productivity, creativity, imagination, power, letting go, taking in new ideas, .The canvas is your master piece. You can even create manuscript paper!!!!!!!

It's so good I started an english community translating the years and years and YEARS worth of information, and building up the Japanese application to help you - and you - and every aspiring self-publisher the advantage of creating your own comics - panels - memes-
--My next goal with the community is doing everything recorded, and using English menus - within each article - or just doing it all over video to complete all the guides in english
here it is: https:\/\/www.reddit.com\/r\/mdiappse\/

it's layer -based - great addition. Many similar shortcuts like photoshop - Ctrl + - to zoom out - Ctrl+; to zoom in -
Spacebar for hand to pan the canvas
\\Brush = b
Eraser = e
Ctrl + T = transform object\/selection

There are types of layers you add in this one, for text, or colour, or lineart specifics. Really cool. Unique feeling applications with tones of features to keep you creating everything at perfectly as you want

Feels super natural for drawing with a Wacom tablet - All the different tools are amazing - Brush scripting is also covered - and amazes. Adding materials to brushes for different effects are amazing.

Super agile mark making on a screen with medium size wacom. It feels soooo cool and intuitive, I need references, but when I draw new things, on these canvases , it feels wonderful. Defualt settings are 600dpi - so be prepared for maximum printing quality.

Will be doing a video on this really soon<
